20. APÉNDICE A: CÓDIGOS DE CRIADOR Y PROPIETARIO

Con el propósito de identificar al Criador/Propietario (Cr/Pr) de cada toro listado en este Resumen de Padres Angus, incluimos los códigos correspondientes a cada uno de ellos, los que fueron aportados por la Sociedad Rural Argentina.

Tener en cuenta que:

- Los códigos iguales o menores a 3000 corresponden a los números de expedientes “definitivos” de la SRA. En cambio, los códigos superiores a 3000 corresponden a los números de expedientes “provisorios”, es decir personas o firmas que poseen Angus de pedigree, pero que aún no registraron crías de dichos reproductores en la SRA.

- En algunos casos, el propietario es el mismo criador, por lo tanto coincide el código de Cr/Pr.

21. APÉNDICE B: VIENTRE ANGUS SUPERIOR (VAS)

Por novena vez desde que en 1989 naciera el ERA (convenio Angus-INTA), la Asociación da a conocer un listado de 209 madres PP y PC de la raza que, surgidas de dicho Programa, sobresalen por su eficiencia reproductiva y la precocidad de crecimiento de sus crías.

La Comisión Técnica de la Asociación Argentina de Angus viene trabajando en una evaluación intra-herd, es decir dentro de cada una de las 503 cabañas que aportan datos al ERA (Evaluación de Reproductores Angus). Así pudo detectar 209 vientres Angus PP y PC –de los 209.194 reunidos en dicho Programa– que se destacan no sólo en eficiencia reproductiva, sino también por la precocidad de crecimiento de sus crías (peso al destete).

Dichas madres, denominadas Vientre Angus Superior (VAS), fueron detectadas poniendo énfasis en los dos parámetros que tanto los criadores como los productores comerciales buscan maximizar en un rodeo de cría:

1. Eficiencia reproductiva y
2. Precocidad de crecimiento hasta el destete.

Esta evaluación es similar, en cuanto a los requisitos que se deben cumplir, a los denominados vientres Pathfinder de la American Angus Association, de Estados Unidos.

El objetivo de nuestra Asociación es identificar a las madres Angus que se destacan, dentro de cada cabaña, por su:

- precocidad sexual,
- facilidad de parto,
- intervalos entre partos y
- pesos al destete de sus crías.

Esto siempre tiene que ser bajo las mismas condiciones (dentro de cabaña) o igual sistema de producción.

Para participar de este servicio que brinda la Asociación Argentina de Angus es sumamente importante que el criador siempre envíe al Programa ERA todas las pariciones de sus vaquillonas y vientres PP y PC –de manera continua, sin excluir ninguna–, con las correspondientes identificaciones y codificaciones clásicas del ERA.

Para que las madres de una cabaña puedan ser catalogadas como VAS, cada hembra PP y PC tiene que cumplir con el siguiente protocolo:

- Haber parido, al menos, tres crías consecutivas concebidas por servicio natural y/o inseminación artificial. Para estas tres primeras pariciones no se toman en cuenta las que son producto de TE.
- Tener un intervalo entre partos (I.E.P.) dentro de $365 + (30 \text{ días}) / n$, donde $n = 1, 2, 3$ (cantidad de pariciones).
- La edad en que recibe su primer servicio (E. 1er S.) debe estar dentro del promedio de los primeros servicios de su cabaña.
- Cada una de dichas crías tiene que tener un índice de destete (I. de D.) no menor a 105, o sea un peso al destete superior, al menos en un 5%, con respecto al promedio de sus contemporáneos dentro de la cabaña. Dicho peso al destete es ajustado a 205 días de edad y por la edad de su madre.
- Los grupos de contemporáneos tienen que estar conformados por no menos de cinco animales.

En este sentido, nos complace dar a conocer este listado de VAS desde que en 1989 se iniciara el ERA, así como también los Criadores Angus Superiores (CAS), es decir quienes criaron y obtuvieron dichas madres destacadas.

22. APÉNDICE C: POR QUÉ EVALUAR TAMAÑO ADULTO EN EL E.R.A.

TOROS PADRES Y TAMAÑO ADULTO DE LOS VIENTRES

En el marco del Programa de Evaluación de Reproductores Angus (ERA), la Asociación Argentina de Angus, con el dinamismo que la caracteriza, ha decidido evaluar los toros padres en tamaño adulto a través de dos DEP asociados al mismo: peso adulto y altura adulta. Como explicaremos a continuación, es una importante herramienta de selección para ser considerada para diferentes sistemas y objetivos de producción. Por tal motivo, las cabañas Angus incorporadas al ERA que deseen colaborar en el monitoreo del tamaño adulto en base a los dos nuevos DEP mencionados, tendrán que incorporar a sus controles de producción tres nuevas mediciones que hacen posible dicho objetivo. En consecuencia, dada la diversidad de sistemas de producción y mercados que abarca nuestra raza Angus, los invitamos a conocer y a adherirse a esta nueva iniciativa de nuestro Programa ERA.

INTRODUCCIÓN

Son muchas las razones para estar siempre atentos en no excedernos en tamaño adulto. En bovinos de carne, el alimento representa el 50-70% de los costos, distribuidos en cría e invernada. Los requerimientos de mantenimiento no han cambiado en los últimos cien años (Johnson, Ferrel, Jenkins, 2003). Más del 50% del consumo total es usado para los gastos de mantenimiento del peso adulto, hasta llegar a la faena (Dickerson, 1970). Más aún, en los rodeos de cría, el 65-70% de los costos totales de energía son usados por los vientres para su mantenimiento (Ferrel, Jenkins, 1985), con el agravante que su peso promedio adulto, en Estados Unidos, se ha incrementado en 136 kilos en los últimos 30 años, mientras que la tasa de preñez decreció a razón del 0,22% anual en los últimos 25 años, en dicho país.

La selección por parte de los criadores y productores comerciales, con mucho énfasis en crecimiento (pesos al destete y finales), podría llevarnos a un incremento del tamaño de los vientres si no sincronizamos adecuadamente tamaño y sistema de producción. Si esto no se controla, lleva a efectos no deseados, tanto en la eficiencia reproductiva como en la invernada de novillos.

Asimismo, los productores de carne están constantemente desafiados por la pregunta de cuánto énfasis relativo poner en cada característica en un programa de selección. Para hacer el problema más difícil, algunas características

son genéticamente antagónicas con otras. Es decir, si una característica es mejorada, la otra podría empeorar. Esto se debe a la correlación genética que existe entre las mismas.

Entre los antagonismos más destacados están:

1. Peso al nacer

Las crías que son demasiado pesadas al nacer, incrementan los problemas de distocia, requieren mayores gastos de manejo y sufren mayor mortalidad.

2. Tasa de crecimiento versus facilidad de parto (easy calving)

La selección por tasa de crecimiento (ganancia) generalmente resulta en un incremento de tamaño en todas las edades, incluyendo al nacimiento. Particularmente en zonas templadas, el peso al nacer es el mayor determinante de la facilidad de parto. Por lo tanto, seleccionar por incremento de la tasa de crecimiento podría también deteriorar la facilidad de parto.

3. Producción de leche y peso corporal versus requerimientos de mantenimiento

Seleccionar para aumentar la productividad a través del incremento de la producción de leche o de la tasa de crecimiento, trae como consecuencia el incremento en proporciones metabólicas de los tejidos activos que tienen que ser mantenidos. Esto requiere energía adicional. En consecuencia, las ganancias por selección para una productividad adicional deben ser lo suficientemente beneficiosas como para compensar el incremento correlacionado en los costos de alimentación.

4. Tamaño de los vientres

El incremento del tamaño de los vientres trae aparejado mayores gastos de mantenimiento, retrasa la pubertad y aumenta los problemas de parto. La Figura 1 muestra los requerimientos de los vientres de acuerdo a los estados fisiológicos y la sincronización de los mismos con la fijación de la época de servicio. Por su parte, la Figura 2 ilustra el déficit nutricional que se genera al aumentar el tamaño de los vientres con las consecuencias previamente mencionadas.

5. Tamaño de los novillos

Si de los vientres mencionados se generan novillos, estos requerirán terminarse a mayores pesos a los fines de tener una terminación adecuada, lo que aumenta los costos, especialmente en pasturas. Son los novillos duros de terminar (Figura 3 y Figura 4).

6. Frame score

Por cada unidad de incremento en el frame score, la altura adulta se incrementará en aproximadamente 4,06 cm y el peso adulto se espera que aumente 37,7 kilos en promedio.

EVALUACIÓN GENÉTICA PARA TAMAÑO ADULTO

El tamaño adulto junto con la altura adulta son características altamente heredables: 0,37 y 0,64, respectivamente. Esto indica que el progreso genético por selección, a través de los DEP de estas características, es exitoso. El modelo animal de evaluación genética es el multiple trait, el cual está basado en medidas repetidas sobre las hembras a lo largo de su vida útil. Los DEP para peso adulto y altura adulta (ambos ajustados a los 550 días) son generados a partir de la información del peso, altura, condición corporal y, como siempre, haciendo uso de la información genealógica (pedigree) (Figura 5). La información resultante de los DEP es representativa para el tamaño adulto de los vientres, proyectados a los seis años de edad.

¿CUÁNDO PESAR Y MEDIR?

Al Destete

PESO	ALTURA	CONDICIÓN CORPORAL

TOMA DE DATOS DE TAMAÑO ADULTO

Para poder obtener el DEP de tamaño adulto y el DEP de altura adulta en los vientres Angus es necesario que los criadores adheridos al ERA cumplan con los siguientes pasos y que la información recolectada sea incluida y enviada en las nuevas planillas de peso al nacer y al destete, diseñadas a tal efecto (ver los recuadros Protocolo de Toma de Datos y Condición Corporal).

1. El peso de la vaquillona o vientre, la clasificación de la condición corporal y la altura del piso a la punta de la cadera deben tomarse al momento del destete de la primera cría, o sea cuando esta tiene 205 días de edad, +/- 45 días (rango: 160 a 250 días).
2. Es importante recolectar dicha información a partir de la primera cría de la vaquillona, así como también en los destetes subsiguientes, en los tiempos ya mencionados.
3. Cualquier peso de vaquillona o vientre que no tenga su condición corporal y altura, no será procesado para obtener los DEP de peso adulto y DEP de altura adulta.
4. El tamaño adulto en los bovinos es altamente afectado por la condición corporal. El estudio del tamaño del vientre en función de su peso requiere

que el peso adulto sea ajustado a un punto común en condición corporal (Northcutt, Wilson, Willham, 1992).

INTERPRETACIÓN

1. El DEP de tamaño adulto es un indicador de los requerimientos de energía. En teoría, cuando un vientre pesa más, es esperado que requiera más alimento, es decir mayor consumo, a los fines de cubrir sus gastos de mantenimiento. La evaluación de un toro padre en peso adulto, en base a la información de sus hijas, será expresada en kilos. Es usualmente seleccionado para reducir tamaño y un predictor de la diferencia en peso adulto de las hijas de un toro, comparado a las hijas de otros toros padres presentes en la evaluación.
2. El DEP de altura adulta se expresa en centímetros y es un predictor de la diferencia en altura adulta de las hijas de un toro, comparado con las hijas de otros toros padres presentes en la evaluación.

Conociendo la relación entre tamaño adulto y la altura adulta, debería servir para asistir a los productores en una mejor definición del frame score o tamaño adulto que mejor se ajuste a su plantel, ambiente específico y fuente de recursos nutricionales.

El uso apropiado de los controles de producción, a los fines de realizar la evaluación genética (DEP) para aplicar la misma en selección de reproductores, ha permitido a los criadores y productores comerciales incrementar el potencial genético y, por ende, los beneficios económicos de la ganadería. Dichos beneficios están determinados por un balance entre los ingresos (mayor eficiencia reproductiva, tasa de crecimiento, rendimiento y calidad del producto) y los costos.

En consecuencia, las decisiones de selección para mejorar el potencial genético y la relación costo-beneficio, deben tomarse a través de la selección simultánea de varias características de interés económico. Esto se debe a la existencia de antagonismos genéticos entre algunas de las características que influyen al beneficio. Debe prestarse mucha atención a la selección por valores extremos, pues estos no garantizan maximizar la mencionada relación. Por el contrario, es más probable que los mayores beneficios se logren con un uso balanceado entre las características de interés económico. Nunca en bovinos de carne debe seleccionarse por una única característica, por ejemplo crecimiento. En muchas características, el óptimo está en valores intermedios.

Es importante destacar que estos antagonismos genéticos no son absolutos y se deben a la correlación genética existente entre características. A modo de ejemplo, existe una fuerte correlación genética (0,7) entre peso al nacer y peso final. Sin embargo, como tenemos una evaluación genética para dichas características, es posible encontrar y seleccionar reproductores de bajos DEP para nacer y buen potencial de crecimiento. Estos son los que se denominan excepciones a la regla o curve bent. Por lo tanto, con respecto a los mencionados

antagonismos genéticos en tamaño adulto, si generamos DEP asociados a dicha característica global también es posible manejarlos y encontrar excepciones biológicas a la regla (curve bent).

PROTOCOLO DE TOMA DE DATOS

La Asociación Argentina de Angus ha decidido obtener los DEP asociados a tamaño adulto, para lo cual es necesario organizar una toma de datos que permita obtener el DEP de peso adulto y el DEP de altura adulta.

Son sólo tres nuevos datos que los criadores deben agregar y registrar en las mismas hembras, en diferentes tiempos de su vida útil: cuando son vaquillonas (primera cría) y en sus crías subsiguientes como vientres:

VAQUILLONAS

1. Peso de la vaquillona al destetar su 1er ternero (destete normal).
2. Altura de la vaquillona al destetar su 1er ternero.
3. Condición corporal al destetar su 1er ternero, en una escala de 1 a 5.

VIENTRES

A las mencionadas vaquillonas hay que seguir tomándoles las medidas previamente mencionadas cada vez que desteten una nueva cría. La idea es tomar la referida información hasta los 5/6 años de edad. La altura adulta se logra a los 5 años, mientras que el peso adulto se logra a una edad algo mayor que 5 años. Las medidas a tomar después de cada destete en el vientre son las siguientes:

4. Peso del vientre al destetar su 2do y subsiguientes terneros (destete normal).
5. Altura del vientre al destetar su 2do y subsiguientes terneros.
6. Condición corporal al destetar su 2do y subsiguientes terneros, en una escala de 1 a 5.

CONDICIÓN CORPORAL

La Comisión Técnica de Angus ha hecho una excelente descripción del uso de esta herramienta de manejo reproductivo. La calificación de condición corporal es una herramienta de gran importancia que nos permite anticipar -con bastante certeza- el comportamiento reproductivo (% de preñez) de los diferentes rodeos sanitariamente controlados.

Esto nos brinda la posibilidad de corregir la condición corporal de las vacas para optimizar los resultados. Observando la Tabla de Condición Corporal resultará fácil identificar los tipos de animal. Familiarizándose con dicha calificación, incluso se facilitará alguna consulta técnica que deba realizarse, aunque no se esté en presencia de ellos. Si se hace una breve síntesis de la influencia que tiene la condición corporal en los ciclos ováricos, veremos la importancia que tiene en los resultados de preñez. El primer punto a tener en cuenta es que, para lograr un intervalo entre partos y primer celo (normal: 60 días), la vaca debe parir en CC 3,5, pues se sabe que a partir de ese momento el animal tiene un balance ener-

gético negativo, lo cual lo ubicará en una CC 3 al momento del servicio, siendo este estado el ideal en nuestros rodeos de cría. Esto indica que se están aprovechando al máximo las raciones disponibles, con posibilidades de preñeces aproximadas al 90%. Por el contrario, si la vaca tiene una CC 2,5 al momento del parto, por la crisis energética ya comentada, al servicio bajará a CC 2. Hay que saber que aunque se mejore la condición corporal luego de parida, el intervalo parto-primer celo es imposible de acortar, con las consiguientes fallas, tales como la demora del primer celo post-parto, lo que aumentará la cola de parición y el porcentaje de vacas que no llegan a ciclar en el período de servicio, bajando notablemente el porcentaje de preñez del rodeo, el cual no superará el 50 o 60%. La causa principal que provoca esta condición corporal es la sobrecarga de animales sobre las raciones disponibles.

En el caso de tener una CC 4, el comportamiento reproductivo va a ser muy bueno, pero antieconómico, ya que se logrará mejorar un 2 o 3% la preñez, pero nos indica una muy baja carga.

Respecto de la condición corporal y la lactación, hay una relación directa entre las mismas. Con condiciones corporales superiores se da alta lactancia y, en consecuencia, altos pesos al destete de las crías, mientras que disminuye la producción cuando las condiciones corporales son bajas.

En conclusión, saber interpretar la condición corporal del rodeo es muy importante para no tener sorpresas negativas al final de los servicios.

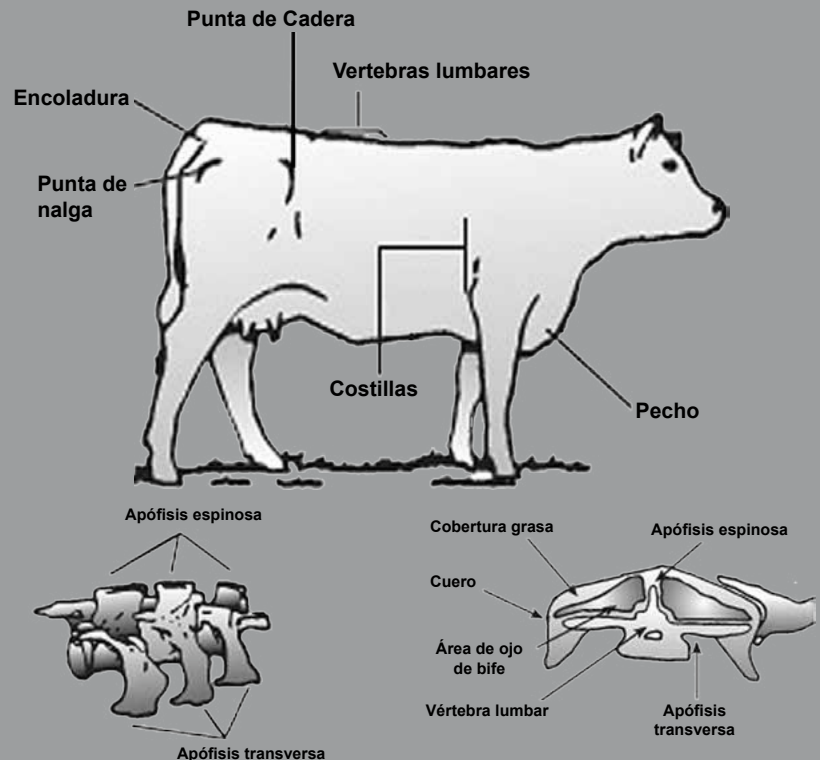

TABLA DE CONDICIÓN CORPORAL

Calificación de condición corporal	Vértabras a la mitad del lomo	Vista posterior (corte transversal) a la altura del hueso ilion	Vista lateral de la línea entre los huesos ilion y el isquion	Cavidad entre la base de la cola y el hueso del isquion. Vistas posterior y lateral
1 Extremadamente flaca				
2 Flaca				
3 Esqueleto visible pero bien cubierta				
4 Encarnada				
5 Extremadamente gorda

A body composition scoring chart for Holstein dairy cows. J. Dairy Sci. 72:68-78

DEPOSICIÓN DE GRASA SUBCUTÁNEA

En bovinos, generalmente el depósito de grasa externa (subcutánea) sobre el cuerpo del animal sigue el siguiente orden:

- Desde la cruz sobre zona dorsal hacia atrás (back o loin)
- Costillas
- Encoladura o base de la cola
- Pecho
- Flanco o babilla
- Vulva y/o recto
- Glándula mamaria

Sin embargo, cuando los requerimientos nutricionales exceden la oferta de alimento, el vientre hace uso de la grasa subcutánea, pero en el orden inverso.

RELACIÓN ENTRE CONDICIÓN CORPORAL Y GRASA SUBCUTÁNEA

Condición Corporal	Grasa Total (%)	Grasa Subcutánea (mm)
1	0,7	0,00
2	9,3	0,13
3	18,0	4,8
4	26,7	10,4
5	35,3	17,3

TABLA DE CONDICIÓN CORPORAL PARA LA RAZA ANGUS

Calificación	Tuberosidades Coxal Esquiática	Espacio Coxal Isquión	Base de Cola	Descripción
				CC 1 (FLACA): Profunda cavidad alrededor del nacimiento de la cola. Huesos pelvianos y coxales fácilmente palpables. Ausencia total de tejido adiposo. Marcada depresión pelviana y lumbar. Vacas en este estado corporal no son funcionales. Están en anestro profundo. Capacidad de lactación comprometida.
				CC 2 (REGULAR): Cavidad menos pronunciada alrededor de la encoladura. Presencia de algo de tejido adiposo. Extremos de costillas algo redondeados. Insuficientes reservas corporales. Luego del parto bajará su estado corporal y se comprometerá su performance reproductiva y lactancia. Anestro superficial.
				CC 3 (IDEAL AL PARTO): Desaparece cavidad alrededor de la cola. Presencia de tejido adiposo no exagerado en esa superficie. Extremos de costillas cortas cubiertas aunque palpables con leve presión.
				CC 4 (SOBREPESO): Aparición de mayor tejido adiposo cubriendo toda la pelvis, costillas cortas invisibles y difíciles de palpar. Estado ideal aunque sea antieconómico. Vacas cíclicas. Excelente lactancia. Buenos índices de preñez, pero es indicativo de baja carga por hectárea.
				CC 5 (OBESA): Engrasamiento exagerado. Desaparece toda la forma de la pelvis. Costillas cortas no palpables. Totalmente excedida de gordura. Antieconómica e incluso con riesgos reproductivos por exceso de grasa.

23. APÉNDICE D: D.E.P. DE FACILIDAD DE PARTO

En 2007, la Asociación Argentina de Angus decidió recopilar datos sobre facilidad de parto (“ease calving”), con el propósito de obtener un DEP para esta característica tan importante en la eficiencia reproductiva. Cabe recordar que el 80% de los problemas de parto están relacionados con el peso al nacer, lo cual está documentado en la literatura. Por ello, nuestro Resumen de Padres Angus brinda, desde 1989, un DEP de peso al nacer, a los fines de controlar los problemas de distocia.

Sin embargo, existe la posibilidad de complementar el mencionado problema con información adicional. De esta manera, la información recopilada por nuestros criadores desde 2007 nos brinda la oportunidad de agregar en nuestro próximo Resumen de Padres, una nueva característica como facilidad de parto, al menos para aquellos toros padres que tengan la información pertinente, diseñada a tal efecto. Es de destacar que desde dicho año, alrededor de 300 criadores nos han acompañado en una ordenada y prolija recopilación de información, con el propósito de evaluar correctamente la facilidad de parto.

FUENTES DE DATOS

La facilidad de parto se ve afectada tanto por factores ambientales como por factores genéticos. Para obtener los DEP de facilidad de parto para los toros padres, tanto directo como materno, pueden usarse el peso al nacer, el largo de gestación, así como también códigos numéricos que indican si los partos provenientes de vaquillonas han necesitado algún tipo de ayuda o no. El peso al nacer es el factor genético más importante, ya que tiene una correlación de casi 0,80 con el DEP directo de facilidad de parto.

Con respecto al largo de gestación, está bien documentado en la literatura que las gestaciones más cortas generan terneros con menores pesos al nacer. El área pélvica y la forma del ternero/a no se usan en la obtención de los DEP de facilidad de parto, pues los códigos de facilidad de parto reflejan mejor la incidencia de ambos factores. La American Angus Association sólo usa, como fuente de información para predecir los DEP de facilidad de parto, lo siguiente: el peso al nacer y los códigos de asistencia al parto. La Angus Society of Australia, por su parte, agrega la longitud de gestación a dicha información.

CÓDIGOS DE FACILIDAD DE PARTO

La calidad del dato y la definición clara de cada una de las diferentes ayudas que pueden presentarse al momento de un parto, con diferentes grados de asistencia, nos permitirá la inclusión de la facilidad de parto en los próximos Resúmenes de Padres Angus, la cual será un instrumento más en la evaluación y selección de toros.

Por tal motivo, fue necesario protocolizar la toma de datos sobre el tipo de parto en vaquillonas, de acuerdo a la siguiente categorización (Tabla I).

TABLA 1

CÓDIGOS DE ASISTENCIA AL PARTO

Código	Definición
1	SIN ASISTENCIA.
2	TRACCIÓN LEVE <i>(una persona sin asistencia mecánica).</i>
3	TRACCIÓN FUERTE <i>(dos personas o con asistencia mecánica).</i>
4	CESÁREA
5	MALA PRESENTACIÓN
6	SIN INFORMACIÓN <i>(se desconoce el tipo de parto).</i>

Nota: * No deben incluirse los casos de cesárea por mala presentación.
** Deben incluirse todos los casos por mala presentación.

Es importante definir en esta instancia qué consideramos un parto normal y qué un parto distócico, relevante para la evaluación genética. Un posicionamiento para un parto normal, como el descrito en la Figura A, es el que se desencadena con éxito dentro de las dos horas de observar la bolsa amniótica y las extremidades delanteras. En el caso de vaquillonas, este proceso puede sufrir una mayor demora; si ésta es demasiada, el ternero puede morir o nacer debilitado. Por lo tanto, debe prestarse especial observación en dichos casos.

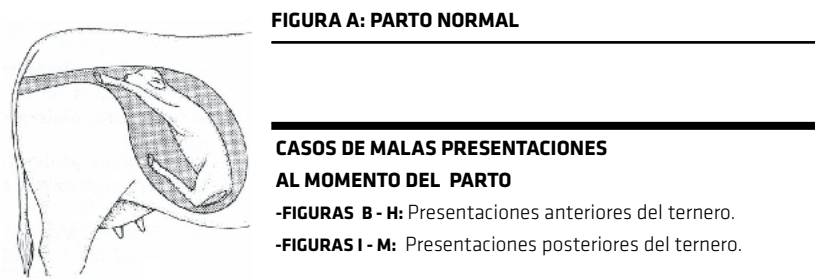

Con respecto a los partos distócicos relevantes para la evaluación genética (códigos 1 al 4), es necesario excluir las malas presentaciones (Figuras B a M), dejando bien en claro que toda mala presentación de un ternero al momento del parto, si bien puede originar en muchos casos un parto distócico, en general no es una causa genética que deba ser atribuida al padre ni a su madre. Por lo tanto, las

malas presentaciones no deben ser incluidas en los códigos del 1 al 4, sino en el código 5.

Lo mismo es válido para las cesáreas, pues deben incluirse con código 4 solamente los animales sujetos a cesáreas que no sean producto de malas presentaciones. Por tal motivo, en estos casos es imprescindible la colaboración y/o aclaración del veterinario para la codificación con el código 4 ó 5.

El objetivo de codificar correctamente el tipo de parto es detectar toros padres que causen problemas o partos distócicos, pero debemos ser cautos y excluir las malas presentaciones, pues éstas no responden a causas genéticas de la madre ni

Tanto el DEP de peso al nacer como el DEP de facilidad de parto son dos herramientas que sirven para evitar problemas de distocia, principalmente en las vaquillonas de primer servicio, que son las que podrían presentar más inconvenientes. Las unidades en que se expresan son diferentes. La Dra. Sally Northcutt, de la American Angus Association, hace una excelente descripción de los mismos. En base a ello, a continuación explicamos esta nueva característica que deseamos incorporar.

DEP DE PESO AL NACER

El DEP de peso al nacer es la tradicional herramienta genética, la cual se expresa en kilos y es un indicador de la característica de facilidad de parto, principalmente en vaquillonas, que es la categoría más crítica o de mayor riesgo. El valor más bajo del DEP de peso al nacer es considerado el más favorable, aunque cada productor debe establecer el rango más razonable de DEP para peso al nacer en el apareamiento de sus vaquillonas. Recordemos que siempre deben verse simultáneamente las demás características de interés económico, pero siempre priorizando y evitando problemas de parto.

En la Tabla II damos un ejemplo del DEP de peso al nacer de dos toros. En promedio, las futuras crías del toro A es esperado que pesen 3 kilos menos que las crías provenientes del toro B, siempre y cuando ambos toros hayan sido apareados con comparables hembras y expuestas a las mismas condiciones ambientales. En dicho caso, los promedios de los pesos al nacer de sus progenies es esperado que difieran en 3 kilos.

TABLA 2

EJEMPLO DE LA INTERPRETACIÓN DEL DEP

de peso al nacer entre dos toros

PESO AL NACER	TORO A	TORO B
DEP	+ 0	+ 3

El peso al nacer es una característica lineal y tiene una distribución normal. La Figura I ilustra que en ambos toros, sus crías variarán en un rango de peso al nacer. La distribución normal muestra que las progenies de dichos toros se distribuirán entre valores de peso al nacer bajos a más altos, con distintas probabilidades. A su vez, ambos toros podrían tener crías del mismo peso al nacer, como se muestra en el área donde ambas curvas se superponen. Pero en promedio, la diferencia entre las progenies de ambos toros será de 3 kilos.

24. APÉNDICE E: DEP DE DOCILIDAD

PROTOCOLO PARA LA TOMA DE DATOS

Históricamente, los criadores de ganado bovino han encontrado una variabilidad importante en el temperamento o docilidad de los animales de sus rodeos. En casos extremos, esto causa problemas de manejo y seguridad de los reproductores, así como también riesgos en los recursos humanos.

A su vez, la comunidad académica ha demostrado que la docilidad está correlacionada con varias características de importancia económica. Además es importante destacar que en la Universidad de Missouri, el Dr. Bob Weaber, a través de sus trabajos encontró que la docilidad tiene una heredabilidad de moderada a alta, dentro de un rango de 0,36 a 0,45. Esto nos permite, si medimos, evaluamos y seleccionamos por dicha característica, lograr un pronto progreso genético en temperamento, así como también en los caracteres correlacionados con docilidad.

METODOLOGÍA

Hay varios métodos para medir o categorizar la docilidad, utilizándose una escala de puntos o scores. Tanto la American Angus Association como la Angus Society of Australia usan scores para codificar el temperamento de sus reproductores, con pequeñas variantes entre ellas: la de Estados Unidos, usa scores de 1 a 6; y la de Australia, aplica scores de 1 a 5. Nuestra Asociación ha decidido, para nuestra toma de datos de docilidad y posterior generación de su DEP, usar los mismos scores que aplica Australia, que se describen en la **Tabla I**.

TABLA I

SCORES DE DOCILIDAD

	<i>Scores</i>	<i>Descripción</i>
1	Dócil	Disposición tranquilo, manso y de fácil manejo. Se queda quieto o se mueve lentamente durante el manejo. No se molesta. Adquiere una posición cómoda, como aburrido. No tira del cepo, y cuando lo soltamos, sale con calma.
2	Inquieto	Tranquilo, pero ligeramente inquieto. Puede ser terco durante el manejo y puede intentar zafarse del cepo hacia atrás, con algún movimiento de la cola. Sale prontamente del cepo, al soltarlo.
3	Nervioso	Manejable, pero nervioso e impaciente. Lucha moderadamente, se mueve y los movimientos de su cola son mayores al de score 2. Empuja y tira del cepo repetidamente y sale enérgicamente al soltarlo de él.
4	Impredecible	Saltarán y fuera de control. Se estremece y lucha con violencia. Puede emitir sonidos y tener espuma en la boca, con movimientos continuos de su cola. Defeca y se orina durante el manejo, encara frenéticamente los corrales y puede saltarlos, aun estando solo. Muestra una gran distancia de huida y sale salvajemente del cepo, al soltarlo.
5	Agresivo	Puede ser similar al score 4, pero además, con conducta agresiva, temerosa, agitación extrema y movimiento continuo, que puede incluir saltos y bramidos mientras está en el cepo. De éste sale frenéticamente al soltarlo y puede mostrar un comportamiento de ataque cuando se lo maneja individualmente en el corral.

Fuente: Angus Society of Australia

MOMENTO DE MEDICIÓN DE LA DOCILIDAD Y CONSIDERACIONES

1. La docilidad debe medirse en las crías, de acuerdo a los scores descriptos, en el rango de 60 a 90 días posteriores a su destete. La ventaja de medir después del destete es asegurarnos que, previo a la medición, los terneros y terneras han tenido un tratamiento similar, minimizándose así el manejo previo al calificar el score.

2. La evaluación de la docilidad en los terneros y terneras, usando los scores descriptos en la **Tabla I**, consiste en pasarlos individualmente por la manga y codificar su comportamiento, al salir de la misma hacia el corral, durante 30

segundos. Después que el animal ha sido codificado, debe soltarse para que el siguiente ingrese a la manga vacía y se repita el procedimiento.

3. Para que los criadores usen el mismo criterio para determinar los cinco scores descriptos, la Asociación elaboró un didáctico video con ejemplos ilustrativos, que está disponible en nuestra web (www.angus.org.ar), en el Canal de Youtube (Asociación Argentina de Angus Oficial) y en las demás redes sociales.

4. La medición de la docilidad debe hacerse como una actividad específica, es decir separada de las demás tareas ganaderas, como el destete, marca-ción, vacunación, etc.

5. Durante la evaluación de la docilidad, con la menor cantidad de personas posible, el ambiente tiene que ser calmo, sin golpes, gritos, rebencazos ni perros, mientras que el ingreso de los animales a la manga debe hacerse a pie.

6. Grupo contemporáneo de docilidad: El criador, en la nueva planilla de Pesadas Posdestete del ERA, además de poner el score de cada animal, tiene que codificar el manejo, es decir asignar el mismo número a todos los terneros y terneras que fueron manejados igual en su acarreo y bienestar, desde el nacimiento hasta la evaluación de su docilidad, como fue descripto.

7. Si a todos los animales de un mismo grupo contemporáneo se les asigna el mismo score de docilidad, no serán evaluados por la Unidad Ejecutora del Instituto de Genética del INTA-Castelar, pues no nos brindan variabilidad genética para la evaluación de la docilidad. El criador tiene que poner siempre el score, mientras que la Unidad Ejecutora se encargará de armar los distintos grupos.

8. Para mantener el trabajo consistente dentro de un mismo día, la calificación de scores debe ser realizada por la misma persona.

9. La fecha de medición, el score y el código de manejo de medición, desde el nacimiento hasta la calificación del score, deben anotarse en la nueva planilla de Pesadas Posdestete del ERA, disponible en nuestra web. Cabe aclarar que el código de manejo de medición no se refiere al código de manejo nutricional, sino al tratamiento grupal de los animales, con respecto a su acarreo o bienestar expuesto entre el nacimiento y la adjudicación del score. En otras palabras, en un mismo grupo de manejo de medición pueden agruparse juntos animales con diferentes códigos nutricionales.

INTERPRETACIÓN DEL DEP DE DOCILIDAD

El DEP de Docilidad se expresa en porcentaje (%): un valor mayor es considerado más favorable, es decir más dócil, en términos de temperamento. La **Tabla II** ilustra cómo usarlos.

Tabla II ilustra cómo usarlos.

Toro	DEP (%)
Toro A	+13%
Toro B	+3%
Diferencia	10%

Fuente: American Angus Association

En este ejemplo podemos ver que hay un 10% de diferencia entre el DEP del toro A y del toro B. Esto significa que, en promedio, si ambos toros son apareados con hembras comparables, cabe esperar que 10 crías "más", provenientes del toro A, sean de temperamento más dócil (score = 1), en comparación con las crías del toro B.

DISTRIBUCIÓN DEL DEP DE DOCILIDAD Y PERCENTILES

La **Figura I** y la **Tabla III** son muy buenos ejemplos de la variabilidad genética que existe en la raza Angus para el DEP de Docilidad. En consecuencia, iniciar la toma de datos de docilidad y generar el DEP de esta importante característica, nos permitirá hacer un rápido progreso genético en los planes de cabaña y, por ende, en los rodeos generales, en beneficio de nuestra ganadería.

Figura I. Distribución del DEP de Docilidad

Fuente: American Angus Association

TABLA III. PERCENTILES

Algunos percentiles	Docilidad (%)
1%	26
5%	21
20%	18
25%	14
50%	9
75%	4
90%	-3
95%	-7
99%	-14

CORRELACIONES GENÉTICAS CON DOCILIDAD

Se ha encontrado una correlación genética positiva entre la docilidad y la ganancia diaria posdestete en feedlot, así como también con el peso de la res caliente. Los DEP Enriquecidos de Docilidad más favorables (animales más tranquilos) están correlacionados positivamente con los DEP de Peso al Año (Dra. Sally Northcutt, American Angus Association). Para el feedlot, donde hay cierta competencia, muchas veces los criadores prefieren seleccionar animales con score 2, en lugar de 1. Si bien hay publicaciones que asocian la docilidad con la ternera, fertilidad de vaquillonas y otras características carniceras, los trabajos no son concluyentes, por lo menos para todas las razas.
